

Venture 30CP

Venture 30CP Specifications

Overall Length: 44.6 in
Overall Height: 17.2 in
Main Rotor Dia: 49.5 in
Gear Ratio: 9:78:1 : 5.18
Weight: Approx. 7 lb
Control system: CCPM
Channels: 5
Servos required: 5 standard
Engine: .32-.38
Ball bearings: Included
Pitch degrees available: 24
Main Blades: Symmetrical
Main Frame: Composite plastic
T/R Drive system: Belt
Completion time: 5 (expert)
10 (novice)

The future
of 30-size helis
has
arrived.

Until now, if you asked someone if JR made an affordable, .30-size ARF heli that'd take you from training through 3D with CCPM precision and simplicity, they'd probably have laughed out loud. Well, JR's Venture 30CP is here, and the joke's on them.

A .30-size ARF heli that lives up to JR's standards for performance and precision would be a bargain at any price. But at \$269.95*, JR's new Venture 30CP is an out-and-out steal.

The efficiency and mechanical simplicity afforded by the Venture's CCPM electronic mixing pays off in extended control precision and greatly reduced wear.

From its rigid, lightweight box main frames to its precision-preserving, setup-simplifying, maintenance-minimizing CCPM mixing, the all-ball-bearing Venture is a one-of-a-kind thoroughbred.

And better yet, it's a CCPM thoroughbred you can enjoy with a radio that's no more elaborate than something along the lines of JR's modestly priced new XP662.

What's more, most newcomers will have their Venture airborne in less than 8 hours, and experts can figure on beating that by half. Fact is, with its

Strong, lightweight frame components assure extreme rigidity and unprecedented crash protection.

pre-trimmed and grommetted canopy, fully assembled and installed main rotor head, tail boom, belt drive, fuel tank and landing gear, most of your time will go into radio installation and control setup, with the help of the Venture's detailed instruction book.

The Venture's ball bearing-supported belt drive is hard to top when it comes to ease of tail rotor setup and reduction of maintenance.

Besides that, a separate 450mm stunt flybar and paddle set is included (the Venture's high stability paddles are already installed), plus you'll have a full 24 degrees of main rotor pitch travel available for 3D flying whenever you're up for it.

Truth be told, we wouldn't be surprised if lots of advanced heli pilots adopt Ventures as low-risk, "no fear" practice machines.

JR's new Venture 30CP. You can start with it, stick with it or just have an all-around ball with it. And best of all, the Venture, along with plenty of parts, is at your JR heli dealer's now.
