

# JR RACING R-1 PRO ADDENDUM

## Modulation/Fast Frame Rate

---

A new feature of the R-1 Pro transmitter is its ability to transmit at a faster frame rate; providing quicker response time over the original R-1 transmitter by operating in a modified PPM (FM) mode. Selecting FPPM (Figure 1) within the Modulation selection menu will enable the fast frame rate feature, benefiting racers who require fast response.

Note: Some types of non-JR servos may be incompatible in the FPPM mode and require the R-1 Pro to be operated in the PPM mode.

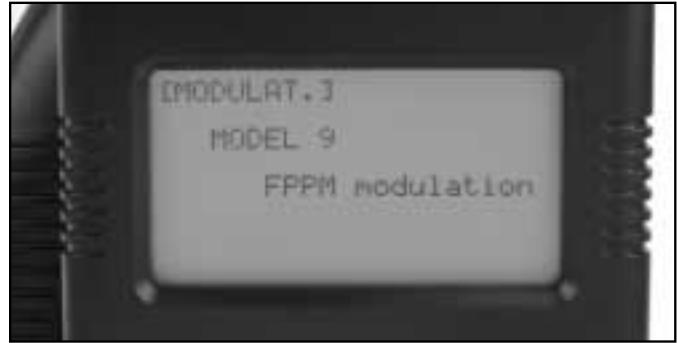

Figure 1: Indicates fast frame rate is selected.
